PROBLEM:

In each of the following parts, two different representations for a signal are given. Find the values of the parameters in the second representation so that the two representations are equivalent.

(a) A signal x(t) is given by $x(t) = 2\cos(200\pi t + \pi/8)$, and its spectrum has the form

(b) The spectrum of a signal
$$x(t)$$
 has the form
$$3e^{j\pi/4} \qquad 3e^{-j\pi/4}$$

$$-100 \qquad 0 \qquad 100 \qquad f \text{ (Hz)}$$

Therefore, the signal has the form

A =

Determine the values for A, f_0 , and t_0 ,

 $f_0 =$

 $t_0 =$

$$\mathfrak{m}$$
 ι_0 ,

 $x(t) = A\cos(2\pi f_0(t - t_0))$
