PROBLEM:

(a) If the filter coefficients of an FIR filter are
$$\{b_k\} = \{0, 1, -1, 1\}$$
, make a plot of the output when the input is the unit step signal: $x[n] = u[n] = \begin{cases} 0 & \text{for } n < 0 \\ 1 & \text{for } n \ge 0 \end{cases}$

FIR FILTER $\{b_k\}$

x[n]

$$< 0$$

 ≥ 0

y[*n*]

Label Carefully Plot zero values also

$$\overrightarrow{7}$$
 \overrightarrow{n}

response of a different FIR filter is
$$\mathcal{H}(\hat{\omega}) = \cos(\frac{1}{2}\hat{\omega})e^{-j\hat{\omega}}$$

of a different FIR filter is
$$\mathcal{H}(\hat{\omega}) = \cos(\frac{1}{2}\hat{\omega})e^{-j\hat{\omega}}$$

ilter is
$$e^{-j\hat{\omega}}$$

ilter is
$$e^{-j\hat{\omega}}$$

response of a different FIR filter is
$$\mathcal{H}(\hat{\omega}) = \cos(\frac{1}{2}\hat{\omega})e^{-j\hat{\omega}}$$

$$\frac{1}{2}\hat{\omega})e^{-j\hat{\omega}}$$
 for $-\infty < n < \infty$,

If the input signal is $x[n] = 1 + 3\cos(\pi n + \pi)$ for $-\infty < n < \infty$, determine a simple mathematical expression for the output signal y[n].
