PROBLEM:

A cascade of two discrete-time systems is depicted by the following block diagram:

$$x[n] \qquad \begin{array}{c} \text{LTI} \\ \text{System #1} \\ h_1[n], H_1(z) \end{array} \qquad w[n] \qquad \begin{array}{c} \text{LTI} \\ \text{System #2} \\ h_2[n], H_2(z) \end{array} \qquad y[n]$$

The systems are defined by the following:

$$H_1(z) = (1 - z^{-2})$$
 and $h_2[n] = (-0.8)^{n-1}u[n-1].$

(a) If the input to the first system is

$$x[n] = \delta[n] - 2\delta[n-1] + \delta[n-2],$$

determine the output, w[n], of the **first** system.

w[n] =

(b) Determine the system function H(z) of the overall system.
