

**PROBLEM:**

Consider the sinusoidal signals  $x(t)$  and  $y(t)$  plotted below.

- (a) Determine  $A$ ,  $f_0$ , and  $\phi$  in the representation of  $x(t)$  as  $x(t) = A \cos(2\pi f_0 t + \phi)$ .

$$A = \underline{\hspace{2cm}} \quad \phi = \underline{\hspace{2cm}} \quad f_0 = \underline{\hspace{2cm}} \text{ (in Hz)}$$

- (b) Now suppose that  $B \cos(\omega_0 t + \psi) = x(t) + 3 \cos(\omega_0 t - 5\pi/6)$ . Determine  $B$ ,  $\omega_0$ , and  $\psi$ .

$$B = \underline{\hspace{2cm}}$$

$$\omega_0 = \underline{\hspace{2cm}}$$

$$\psi = \underline{\hspace{2cm}}$$

- (c) The signal  $y(t)$  can be expressed in terms of  $x(t)$ . That is, we can write  $x(t) = Cy(t - t_1)$ . Determine the numerical values of the scale factor  $C$  and the time shift  $t_1$ , where  $t_1 \geq 0$ .

$$C = \underline{\hspace{2cm}} \quad t_1 = \underline{\hspace{2cm}}$$
