

PROBLEM:

Consider the sinusoidal signals $x(t)$ and $y(t)$ plotted below.

The Sinusoid $x(t)$

The Sinusoid $y(t)$

- (a) Determine A , f_0 , and ϕ in the representation of $x(t)$ as $x(t) = A \cos(2\pi f_0 t + \phi)$.

$$A = \underline{\hspace{2cm}}, \quad \phi = \underline{\hspace{2cm}}, \quad f_0 = \underline{\hspace{2cm}} \text{ (in Hz)}$$

- (b) Now suppose that $B \cos(\omega_0 t + \psi) = x(t) + 0.375 \cos(\omega_0 t)$. Determine B , ω_0 , and ψ .

$$B = \underline{\hspace{2cm}}$$

$$\omega_0 = \underline{\hspace{2cm}}$$

$$\psi = \underline{\hspace{2cm}}$$

- (c) The signal $y(t)$ can be expressed in terms of $x(t)$. That is, we can write $x(t) = Cy(t - t_1)$. Determine the numerical values of the scale factor C and the time shift t_1 , where $t_1 \geq 0$.

$$C = \underline{\hspace{2cm}}, \quad t_1 = \underline{\hspace{2cm}}$$
