DSP-First, 2nd Edition

1 Introduction **1**
- 1-1 Mathematical Representation of Signals . . . 2
- 1-2 Mathematical Representation of Systems . . . 5
- 1-3 Systems as Building Blocks . . . 7
- 1-4 The Next Step . . . 8

2 Sinusoids **9**
- 2-1 Tuning-Fork Experiment . . . 10
- 2-2 Review of Sine and Cosine Functions . . . 12
- 2-3 Sinusoidal Signals . . . 14
  - 2-3.1 Relation of Frequency to Period . . . 15
  - 2-3.2 Phase and Time Shift . . . 17
- 2-4 Sampling and Plotting Sinusoids . . . 19
- 2-5 Complex Exponentials and Phasors . . . 21
  - 2-5.1 Review of Complex Numbers . . . 22
  - 2-5.2 Complex Exponential Signals . . . 23
  - 2-5.3 The Rotating Phasor Interpretation . . . 25
  - 2-5.4 Inverse Euler Formulas . . . 27
- 2-6 Phasor Addition . . . 28
  - 2-6.1 Addition of Complex Numbers . . . 29
  - 2-6.2 Phasor Addition Rule . . . 29
  - 2-6.3 Phasor Addition Rule: Example . . . 31
  - 2-6.4 MATLAB Demo of Phasors . . . 33
  - 2-6.5 Summary of the Phasor Addition Rule . . . 33
- 2-7 Physics of the Tuning Fork . . . 34
  - 2-7.1 Equations from Laws of Physics . . . 34
  - 2-7.2 General Solution to the Differential Equation . . . 37
  - 2-7.3 Listening to Tones . . . 38
- 2-8 Time Signals: More Than Formulas . . . 38
- 2-9 Summary and Links . . . 39
- 2-10 Problems . . . 40

3 Spectrum Representation **49**
- 3-1 The Spectrum of a Sum of Sinusoids . . . 50
  - 3-1.1 Notation Change . . . 52
  - 3-1.2 Graphical Plot of the Spectrum . . . 52
  - 3-1.3 Analysis versus Synthesis . . . 53
- 3-2 Sinusoidal Amplitude Modulation . . . 54
  - 3-2.1 Multiplication of Sinusoids . . . 54
  - 3-2.2 Beat Note Waveform . . . 55
  - 3-2.3 Amplitude Modulation . . . 58
  - 3-2.4 AM Spectrum . . . 59
  - 3-2.5 The Concept of Bandwidth . . . 60
- 3-3 Operations on the Spectrum . . . 61
  - 3-3.1 Scaling or Adding a Constant . . . 61
  - 3-3.2 Adding Signals . . . 62
  - 3-3.3 Time-Shifting $x(t)$ Multiplies a_k by a Complex Exponential . . . 64
  - 3-3.4 Differentiating $x(t)$ Multiplies a_k by $(j2\pi f_k)$ . . . 64
  - 3-3.5 Frequency Shifting . . . 65
- 3-4 Periodic Waveforms . . . 67

3-4.1 Synthetic Vowel . . . 68
3-4.2 Sine-Cubed Signal . . . 71
3-4.3 Example of a Non-Periodic Signal . . . 72
3-5 Fourier Series . . . 74
3-5.1 Fourier Series: Analysis . . . 75
3-5.2 Analysis of a Full-Wave Rectified Sine Wave . . . 75
3-5.3 Spectrum of the FWRS Fourier Series . . . 78
3-6 Time–Frequency Spectrum . . . 81
3-6.1 Stepped Frequency . . . 83
3-6.2 Spectrogram Analysis . . . 83
3-7 Frequency Modulation: Chirp Signals . . . 85
3-7.1 Chirp or Linearly Swept Frequency . . . 85
3-7.2 A Closer Look at Instantaneous Frequency . . . 87
3-8 Summary and Links . . . 89
3-9 Problems . . . 90

4 Sampling and Aliasing 102
4-1 Sampling . . . 103
4-1.1 Sampling Sinusoidal Signals . . . 105
4-1.2 The Concept of Aliases . . . 107
4-1.3 Sampling and Aliasing . . . 109
4-1.4 Spectrum of a Discrete-Time Signal . . . 109
4-1.5 The Sampling Theorem . . . 110
4-1.6 Ideal Reconstruction . . . 111
4-2 Spectrum View of Sampling and Reconstruction . . . 113
4-2.1 Spectrum of a Discrete-Time Signal Obtained by Sampling . . . 113
4-2.2 Over-Sampling . . . 114
4-2.3 Aliasing Due to Under-Sampling . . . 115
4-2.4 Folding Due to Under-Sampling . . . 116
4-2.5 Maximum Reconstructed Frequency . . . 118
4-2.6 Sampling and Reconstruction GUI . . . 120
4-3 Discrete-to-Continuous Conversion . . . 121
4-3.1 Interpolation with Pulses . . . 121
4-3.2 Zero-Order Hold Interpolation . . . 122
4-3.3 Linear Interpolation . . . 123
4-3.4 Cubic-Spline Interpolation . . . 124
4-3.5 Over-Sampling Aids Interpolation . . . 125
4-3.6 Ideal Bandlimited Interpolation . . . 127
4-4 The Sampling Theorem . . . 128
4-5 Strobe Demonstration . . . 129
4-5.1 Spectrum Interpretation . . . 133
4-6 Summary and Links . . . 135
4-7 Problems . . . 135

5 FIR Filters 147
5-1 Discrete-Time Systems . . . 148
5-2 The Running-Average Filter . . . 149
5-3 The General FIR Filter . . . 153
5-3.1 An Illustration of FIR Filtering . . . 156
5-4 The Unit Impulse Response and Convolution . . . 158
5-4.1 Unit Impulse Sequence . . . 158
5-4.2 Unit Impulse Response Sequence . . . 159
5-4.3 FIR Filters and Convolution . . . 161
5-5 Implementation of FIR Filters . . . 169
5-5.1 Building Blocks . . . 169
5-5.2 Block Diagrams . . . 170
5-6 Linear Time-Invariant (LTI) Systems . . . 174
5-6.1 Time Invariance . . . 175
5-6.2 Linearity . . . 176
5-6.3 The FIR Case . . . 177
5-7 Convolution and LTI Systems . . . 178
5-7.1 Derivation of the Convolution Sum . . . 179

5-7.2 Some Properties of LTI Systems . . . 180
5-8 Cascaded LTI Systems . . . 182
5-9 Example of FIR Filtering . . . 184
5-10 Summary and Links . . . 187
5-11 Problems . . . 187

6 Frequency Response of FIR Filters 194
6-1 Sinusoidal Response of FIR Systems . . . 195
6-2 Superposition and the Frequency Response . . . 198
6-3 Steady-State and Transient Response . . . 201
6-4 Properties of the Frequency Response . . . 203
6-4.1 Relation to Impulse Response and Difference Equation . . . 203
6-4.2 Periodicity of $H(e^{j\Omega})$ . . . 205
6-4.3 Conjugate Symmetry . . . 205
6-5 Graphical Representation of the Frequency Response . . . 206
6-5.1 Delay System . . . 206
6-5.2 First-Difference System . . . 207
6-5.3 A Simple Lowpass Filter . . . 209
6-6 Cascaded LTI Systems . . . 212
6-7 Running-Sum Filtering . . . 214
6-7.1 Plotting the Frequency Response . . . 215
6-7.2 Cascade of Magnitude and Phase . . . 219
6-7.3 Frequency Response of Running Averager . . . 220
6-7.4 Experiment: Smoothing an Image . . . 220
6-8 Filtering Sampled Continuous-Time Signals . . . 224
6-8.1 Example: A Lowpass Averager for Continuous-Time Signals . . . 225
6-8.2 Interpretation of Delay . . . 226
6-9 Summary and Links . . . 229
6-10 Problems . . . 230

7 Discrete-Time Fourier Transform 239
7-1 DTFT: Fourier Transform for Discrete-Time Signals . . . 240
7-1.1 Forward DTFT . . . 241
7-1.2 DTFT of a Shifted Impulse Sequence . . . 241
7-1.3 Linearity of the DTFT . . . 242
7-1.4 Uniqueness of the DTFT . . . 243
7-1.5 DTFT of a Pulse . . . 243
7-1.6 DTFT of a Right-Sided Exponential Sequence . . . 244
7-1.7 Existence of the DTFT . . . 245
7-1.8 The Inverse DTFT . . . 246
7-1.9 Bandlimited DTFT . . . 247
7-1.10 Inverse DTFT for the Right-Sided Exponential . . . 250
7-1.11 The DTFT Spectrum . . . 250
7-2 Properties of the DTFT . . . 251
7-2.1 Linearity Property . . . 252
7-2.2 Time-Delay Property . . . 252
7-2.3 Frequency-Shift Property . . . 253
7-2.4 Convolution and the DTFT . . . 255
7-2.5 Energy Spectrum and the Autocorrelation Function . . . 257
7-3 Ideal Filters . . . 259
7-3.1 Ideal Lowpass Filter . . . 260
7-3.2 Ideal Highpass Filter . . . 262
7-3.3 Ideal Bandpass Filter . . . 263
7-4 Practical FIR Filters . . . 264
7-4.1 Windowing . . . 264
7-4.2 Filter Design . . . 265
7-4.3 GUI for Filter Design . . . 271
7-5 Table of Fourier Transform Properties and Pairs . . . 272
7-6 Summary and Links . . . 273
7-7 Problems . . . 274

8 Discrete Fourier Transform **281**
8-1 Discrete Fourier Transform (DFT) . . . 282
8-1.1 The Inverse DFT . . . 284
8-1.2 DFT Pairs from the DTFT . . . 286
8-1.3 Computing the DFT . . . 288
8-1.4 Matrix Form of the DFT and IDFT . . . 289
8-2 Properties of the DFT . . . 290
8-2.1 DFT Periodicity for $X[k]$ . . . 291
8-2.2 Negative Frequencies and the DFT . . . 291
8-2.3 Conjugate Symmetry of the DFT . . . 292
8-2.4 Frequency-Domain Sampling and Interpolation . . . 294
8-2.5 DFT of a Real Cosine Signal . . . 296
8-3 Inherent Time-Domain Periodicity of $x[n]$ in the DFT . . . 298
8-3.1 DFT Periodicity for $x[n]$ . . . 299
8-3.2 The Time Delay Property for the DFT . . . 301
8-3.3 The Convolution Property for the DFT . . . 304
8-4 Table of Discrete Fourier Transform Properties and Pairs . . . 306
8-5 Spectrum Analysis of Discrete Periodic Signals . . . 307
8-5.1 Periodic Discrete-Time Signal: Discrete Fourier Series . . . 308
8-5.2 Sampling Bandlimited Periodic Signals . . . 311
8-5.3 Spectrum Analysis of Periodic Signals . . . 314
8-6 Windows . . . 317
8-6.1 DTFT of Windows . . . 319
8-7 The Spectrogram . . . 322
8-7.1 An Illustrative Example . . . 323
8-7.2 Time-Dependent DFT . . . 325
8-7.3 The Spectrogram Display . . . 328
8-7.4 Interpretation of the Spectrogram . . . 328
8-7.5 Spectrograms in MATLAB . . . 333
8-8 The Fast Fourier Transform (FFT) . . . 334
8-8.1 Derivation of the FFT . . . 334
8-9 Summary and Links . . . 338
8-10 Problems . . . 338

9 z-Transforms **347**
9-1 Definition of the z-Transform . . . 348
9-2 Basic z-Transform Properties . . . 351
9-2.1 Linearity Property of the z-Transform . . . 351
9-2.2 Time-Delay Property of the z-Transform . . . 351
9-2.3 A General z-Transform Formula . . . 352
9-3 The z-Transform and Linear Systems . . . 353
9-3.1 Unit-Delay System . . . 354
9-3.2 z^{-1} Notation in Block Diagrams . . . 354
9-3.3 The z-Transform of an FIR Filter . . . 355
9-3.4 z-Transform of the Impulse Response . . . 355
9-3.5 Roots of a z-Transform Polynomial . . . 356
9-4 Convolution and the z-Transform . . . 358
9-4.1 Cascading Systems . . . 361
9-4.2 Factoring z-Polynomials . . . 363
9-4.3 Deconvolution . . . 364
9-5 Relationship Between the z-Domain and the $\hat{\omega}$-Domain . . . 364
9-5.1 The z-Plane and the Unit Circle . . . 366
9-5.2 The z-Transform and the DFT . . . 367
9-6 The Zeros and Poles of $H(z)$ . . . 369
9-6.1 Pole-Zero Plot . . . 370
9-6.2 Significance of the Zeros of $H(z)$ . . . 371
9-6.3 Nulling Filters . . . 372
9-6.4 Graphical Relation Between z and $\hat{\omega}$ . . . 373
9-6.5 Three-Domain Movies . . . 376
9-7 Simple Filters . . . 377
9-7.1 Generalize the L-Point Running-Sum Filter . . . 377
9-7.2 A Complex Bandpass Filter . . . 379

9-7.3 A Bandpass Filter with Real Coefficients . . . 379
9-8 Practical Bandpass Filter Design . . . 381
9-9 Properties of Linear-Phase Filters . . . 384
9-9.1 The Linear-Phase Condition . . . 384
9-9.2 Locations of the Zeros of FIR Linear-Phase Systems . . . 385
9-10 Summary and Links . . . 386
9-11 Problems . . . 387

10 IIR Filters **394**
10-1 The General IIR Difference Equation . . . 395
10-2 Time-Domain Response . . . 396
10-2.1 Linearity and Time Invariance of IIR Filters . . . 398
10-2.2 Impulse Response of a First-Order IIR System . . . 399
10-2.3 Response to Finite-Length Inputs . . . 401
10-2.4 Step Response of a First-Order Recursive System . . . 402
10-3 System Function of an IIR Filter . . . 405
10-3.1 The General First-Order Case . . . 405
10-3.2 $H(z)$ from the Impulse Response . . . 407
10-4 The System Function and Block Diagram Structures . . . 408
10-4.1 Direct Form I Structure . . . 408
10-4.2 Direct Form II Structure . . . 409
10-4.3 The Transposed Form Structure . . . 411
10-5 Poles and Zeros . . . 412
10-5.1 Roots in MATLAB . . . 414
10-5.2 Poles or Zeros at $z = 0$ or ∞ . . . 414
10-5.3 Output Response from Pole Location . . . 415
10-6 Stability of IIR Systems . . . 416
10-6.1 The Region of Convergence and Stability . . . 418
10-7 Frequency Response of an IIR Filter . . . 420
10-7.1 Frequency Response Using MATLAB . . . 421
10-7.2 Three-Dimensional Plot of a System Function . . . 423
10-8 Three Domains . . . 424
10-9 The Inverse z-Transform and Applications . . . 426
10-9.1 Revisiting the Step Response of a First-Order System . . . 426
10-9.2 A General Procedure for Inverse z-Transformation . . . 429
10-10 Steady-State Response and Stability . . . 431
10-11 Second-Order Filters . . . 435
10-11.1 z-Transform of Second-Order Filters . . . 435
10-11.2 Structures for Second-Order IIR Systems . . . 436
10-11.3 Poles and Zeros . . . 438
10-11.4 Impulse Response of a Second-Order IIR System . . . 440
10-11.5 Complex Poles . . . 442
10-12 Frequency Response of Second-Order IIR Filter . . . 446
10-12.1 Frequency Response via MATLAB . . . 447
10-12.2 3-dB Bandwidth . . . 448
10-12.3 Three-Dimensional Plot of a System Function . . . 450
10-12.4 Pole-Zero Placing with the PeZ GUI . . . 452
10-13 Example of an IIR Lowpass Filter . . . 454
10-14 Summary and Links . . . 456
10-15 Problems . . . 457

A Complex Numbers **469**
A-1 Introduction . . . 470
A-2 Notation for Complex Numbers . . . 471
A-2.1 Rectangular Form . . . 471
A-2.2 Polar Form . . . 472
A-2.3 Conversion: Rectangular and Polar . . . 472
A-2.4 Difficulty in Second or Third Quadrant . . . 474
A-3 Euler's Formula . . . 475
A-3.1 Inverse Euler Formulas . . . 476
A-4 Algebraic Rules for Complex Numbers . . . 476
A-4.1 Complex Number Exercises . . . 478

A-5 Geometric Views of Complex Operations . . . 480
A-5.1 Geometric View of Addition . . . 480
A-5.2 Geometric View of Subtraction . . . 481
A-5.3 Geometric View of Multiplication . . . 482
A-5.4 Geometric View of Division . . . 482
A-5.5 Geometric View of the Inverse, z^{-1} . . . 483
A-5.6 Geometric View of the Conjugate, z^* . . . 483
A-6 Powers and Roots . . . 484
A-6.1 Roots of Unity . . . 485
A-7 Summary and Links . . . 488
A-8 Problems . . . 488

B Programming in MATLAB 491
B-1 MATLAB Help . . . 492
B-2 Matrix Operations and Variables . . . 492
B-2.1 The Colon Operator . . . 493
B-2.2 Matrix and Array Operations . . . 494
B-3 Plots and Graphics . . . 496
B-3.1 Figure Windows . . . 496
B-3.2 Multiple Plots . . . 497
B-3.3 Printing and Saving Graphics . . . 497
B-4 Programming Constructs . . . 497
B-4.1 MATLAB Built-In Functions . . . 498
B-4.2 Program Flow . . . 498
B-5 MATLAB Scripts . . . 498
B-6 Writing a MATLAB Function . . . 499
B-6.1 Creating a Clip Function . . . 499
B-6.2 Debugging a MATLAB M-file . . . 501
B-7 Programming Tips . . . 502
B-7.1 Avoiding Loops . . . 502
B-7.2 Repeating Rows or Columns . . . 503
B-7.3 Vectorizing Logical Operations . . . 504
B-7.4 Creating an Impulse . . . 505
B-7.5 The Find Function . . . 505
B-7.6 Seek to Vectorize . . . 506
B-7.7 Programming Style . . . 506

C Fourier Series 507
C-1 Fourier Series Derivation . . . 508
C-1.1 Fourier Integral Derivation . . . 508
C-2 Examples of Fourier Analysis . . . 511
C-2.1 The Pulse Wave . . . 514
C-2.2 Triangular Wave . . . 518
C-2.3 Half-Wave Rectified Sine . . . 521
C-3 Operations on Fourier Series . . . 524
C-3.1 Scaling or Adding a Constant . . . 524
C-3.2 Adding Signals . . . 525
C-3.3 Time-Scaling Property . . . 526
C-3.4 Time-Shifting Property . . . 527
C-3.5 Differentiation Property . . . 528
C-3.6 Frequency-Shifting Property and Multiplying by a Sinusoid . . . 529
C-4 Average Power, Convergence, and Optimality . . . 531
C-4.1 Derivation of Parseval's Theorem . . . 534
C-4.2 Convergence of Fourier Synthesis . . . 534
C-4.3 Minimum Mean-Square Approximation . . . 536
C-5 The Spectrum in Pulsed-Doppler Radar Waveform Design . . . 538
C-5.1 Measuring Range . . . 538
C-5.2 Measuring Velocity from Doppler Shift . . . 539
C-5.3 Pulsed-Doppler Radar Waveform . . . 541
C-5.4 Measuring the Doppler Shift . . . 542
C-6 Problems . . . 543
